

ORCHARD MODELS WITH SIDE DISCHARGE

RN SERIES

TWO GEARBOXES FOR OPPOSITE ROTATION

Two separate gearboxes rotating in opposite directions drive the two main blades of our RN-mowers. This improves the cutting quality, even in higher grass.

The cut material is evenly distributed behind the machine over its full working width or can, if required, be spread to the left and right hand side of the machine on the tree strips.

**Orchard mower with side discharge can distribute grass on the tree strip.
Less demand for fertilizers.**

RN SERIES

Orchard models with side discharge

An optional manual or hydraulic offset device allows to work closer to the trees while keeping the tractor as central as possible between the tree rows.

The tandem rear roller, which is available as an option, increases the bearing surface and spreads the ground pressure more evenly which gives the machine a smooth run. Especially under humid working conditions and in the case of mow-spray combination the tandem roller protects the ground structure.

EXTRA'S

- Manual or hydraulic parallelogram type offset device
- "Perfect" pulling type headstock for front mount
- Double headstock for front and rear mount
- Mow-spray combination feature
- Tandem roller

TECHNICAL SPECIFICATIONS	RN-180	RN-200	RN-225	RN-250	RN-290
Cutting width (cm/inch)	180 / 5'11"	200 / 6'7"	225 / 7'5"	250 / 8'2"	290 / 9'6"
